

PAINT CONCEPT · WILLIAMSBURG, MICHIGAN

5265 Bates Road

Acme Township · Grand Traverse County · 5 wooded acres · 4 bed / 3 bath · 2,479 sf · built 1999

Listed at $649,900

> Whole-house paint concept. Interior walls are Sherwin-Williams Shoji White, trim is Alabaster, and cabinets are Benjamin Moore Edgecomb Gray. Wood ceilings and beams stay natural. Outside, Alabaster siding and Tricorn Black trim are shown with three roof options.

Shoji White	Alabaster	Edgecomb Gray	Tricorn Black

How to read the photos. Each image shows the concept. A small “As listed” inset in the corner is the original listing photo. The live page at https://clarkhuang.github.io/5265-bates-rd/ has drag sliders that open on the concept. These are visualizations, not a contractor proposal.

MLS 1947689 · Christina Ingersoll, REMAX Bayshore · Vinyl siding, asphalt roof, attached 2-car drive-under garage, private well and septic. Access by a driveway easement off S Bates Road.

Approximate professional costs

Rough estimates for professional work in Northern Michigan in 2026, not bids. Wood ceilings and beams are excluded from the interior total because they stay natural.

Interior painting

SCOPE	WHAT'S INCLUDED	LOW	HIGH
Interior walls	Whole interior, about 2,479 finished square feet, in eggshell or matte Shoji White	$4,500	$9,000
Trim, doors, and railings	Baseboards, casings, interior doors, stair and loft railings, and wall paneling, in semi-gloss Alabaster	$3,000	$7,500
Cabinets and vanities	Kitchen cabinets, vanities, linen cabinet, and medicine-cabinet frames, in satin urethane enamel Edgecomb Gray	$4,000	$9,500
Interior painting total	**Walls, trim, and cabinets. Ceilings excluded.**	**$11,500**	**$26,000**

Exterior paint and roof

SCOPE	WHAT'S INCLUDED	LOW	HIGH
Exterior painting	Vinyl siding in Alabaster (or a VinylSafe dark body), trim, fascia, soffit, garage doors, and deck railings. Stone pillars stay natural.	$9,000	$20,000
New architectural shingle roof	Tear-off and replace the existing green asphalt roof with charcoal-black architectural shingles	$16,000	$35,000
Standing-seam metal roof	High-end dark standing-seam metal instead of shingles	$32,000	$65,000
Paint only, keep existing roof	**Exterior painting only**	**$9,000**	**$20,000**
Paint + new shingle roof	**Painting plus a dark architectural shingle reroof**	**$25,000**	**$55,000**
Paint + standing-seam metal	**Painting plus a dark standing-seam metal roof**	**$41,000**	**$85,000**

Dark vinyl body colors need a VinylSafe formula such as Pepper Shaker SWVS 435. Regular Iron Ore and Tricorn Black are not VinylSafe body colors and should not go on the siding itself.

Interior concept

> Walls are Shoji White throughout. Trim, doors, railings, and wall paneling are Alabaster. Cabinets are Edgecomb Gray. Wood tongue-and-groove ceilings and structural beams stay natural.

Exterior concept

Country-modern paint on all three options: Alabaster siding, Tricorn Black fascia, soffit, window trim, and garage doors, and Iron Ore deck railings. The natural stone pillars stay as they are.

Exterior · Keep existing roof

Alabaster siding and black trim, with the existing green architectural shingle roof left as it is. Exterior painting only, about $9,000–$20,000.

Aerial view

Front and garage

Side and deck

From the drive

Exterior · New charcoal shingles

The same country-modern paint plus a new charcoal-black architectural shingle roof. Paint and shingles together, about $25,000–$55,000.

Aerial view

Front and garage

Side and deck

From the drive

Exterior · Standing-seam metal

The same paint plus a dark standing-seam metal roof. The high-end package, about $41,000–$85,000.

Dark-body alternate

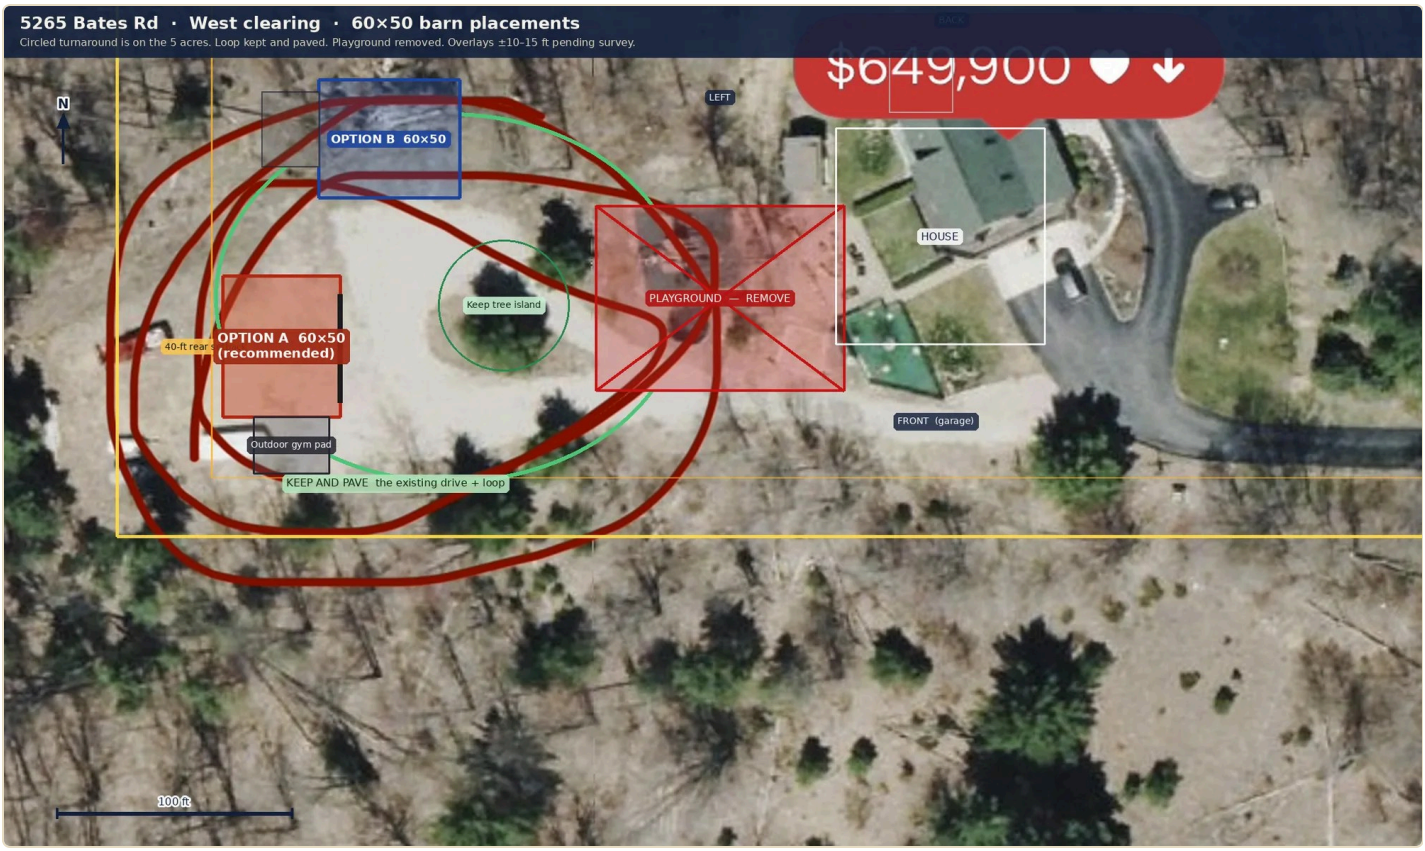

The same dark roof and railings, with a charcoal body and Alabaster trim, is shown on the website as a VinylSafe alternate. Use a VinylSafe formula such as Pepper Shaker SWVS 435, not regular Iron Ore, if you paint the vinyl this dark.

Barn concept

A 60×50 pole barn (3,000 sf) with a 16 ft eave, planned as a shop, vehicle barn, and full CrossFit gym, at the sandy circular turnaround to the left of and behind the house. That clearing is on the 5 acres. The existing drive and loop stay and are paved, including the tree island. The playground west of the house comes out.

Option A (recommended) sits on the west edge of the clearing and becomes the west side of the paved court. The two 12×14 doors face east onto the loop. The gym door is on the south wall, opening to an outdoor workout pad.

Option B sits just north of the loop, with the doors facing south onto the paved circle. Setbacks are comfortable, but the hill drops hard to the north, so expect more cut and fill.

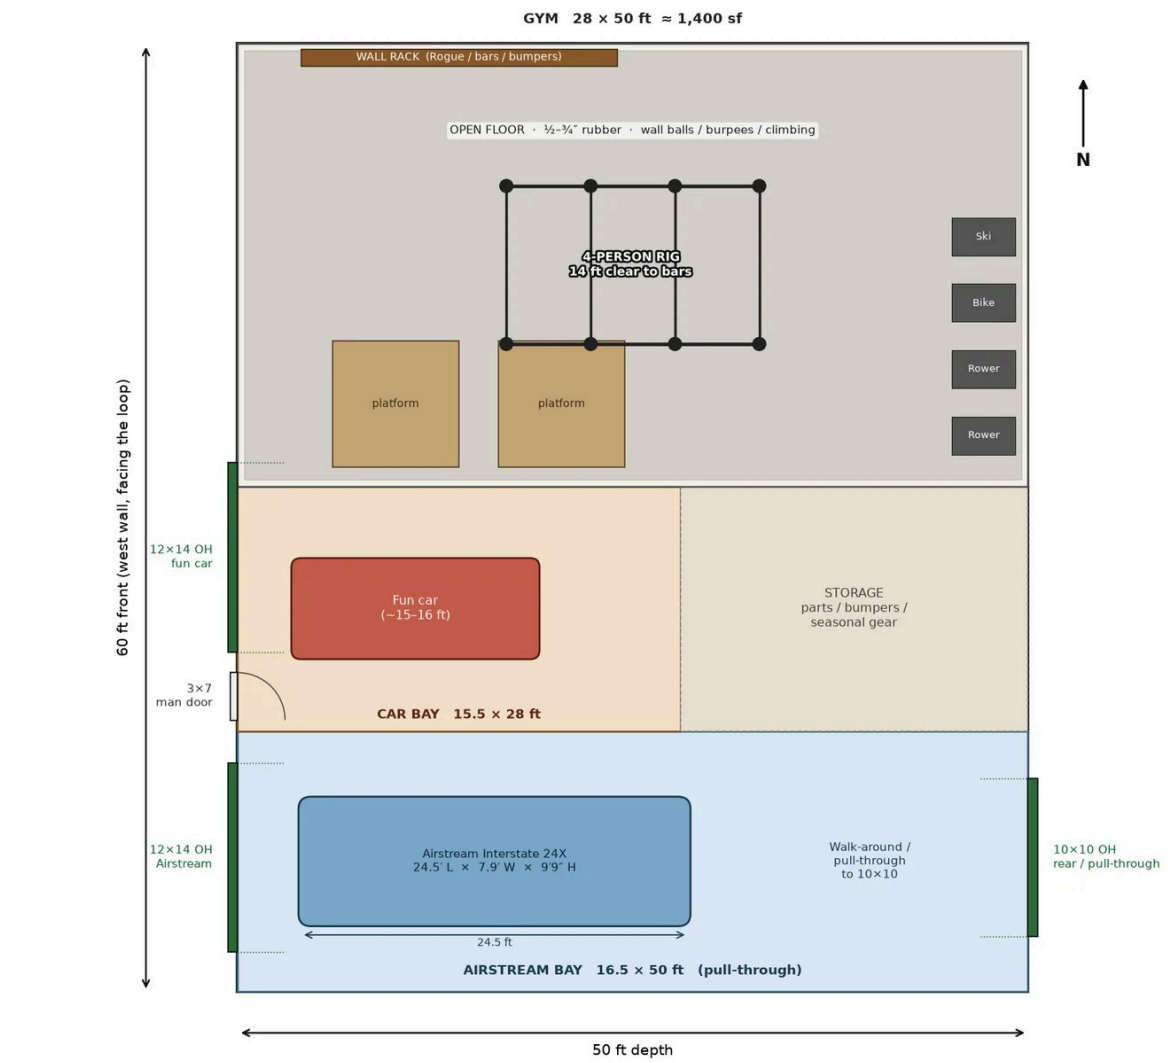

The west clearing, with the playground marked for removal and both barn placement options. The existing drive and loop stay and are paved.

Site plan with parcel line, setbacks, and grade. Option A is recommended.

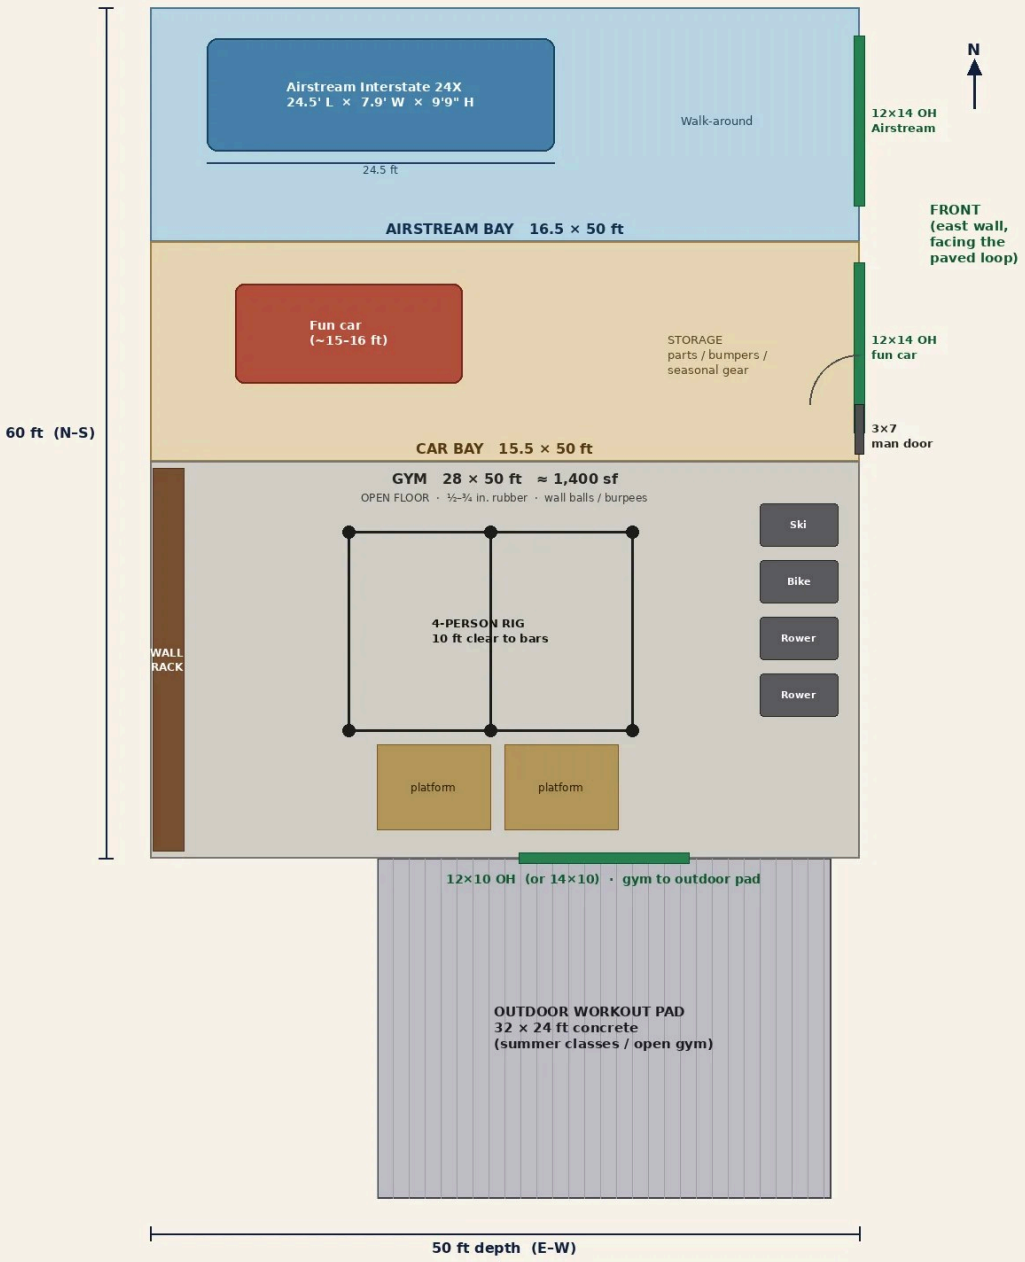

Wider aerial of the five-acre parcel, the house, the west loop, and the driveway easement from S Bates Road.

Clear height: 16 ft eave recommended so a 12–14 ft door and a 4-person rig both fit (~14 ft to the bars). Peak is ~22–24 ft with a 3/12–4/12 roof (Option A leaves this vault exposed).
60×50 is enough: ~800 sf Airstream lane, a dedicated car stall, and ~1,400 sf gym. A 60×60 would add a bathroom / more storage, but is not required.
Rear 10×10 is shown on the east (downhill) wall for pull-through. If the slope makes that impractical, put it on the south wall of the Airstream bay instead.

Clark-spec finish: closed-cell spray foam on the underside of the roof steel (trusses left exposed) · 2–3 in. foam in the walls · 8 ft plywood wainscot + steel liner above · concrete slab · LED shop ligh
Ceiling stays unfinished. Plywood costs more than drywall but is the better gym surface (impact, wall-mount racks, CrossFit look).

Interior layout for Option A: two 12×14 vehicle doors facing the paved loop, gym at the south wall with a door to the outdoor pad.

Clear height: 16 ft eave so a 12–14 ft door and a 4-person rig both fit (~14 ft to the bars). Peak is about 22–24 ft with a 3/12–4/12 roof (Option A leaves this vault exposed).

60×50 is enough: an ~800 sf Airstream lane, a dedicated car stall, and ~1,400 sf of gym. Orientation shown is Option A (doors east onto the west loop). For Option B, rotate 90° so the vehicle doors face south.

The gym-side 12×10 (or 14×10) overhead opens to a 32×24 ft concrete pad for summer outdoor workouts. Width matters more than height for rolling equipment out; 14×10 is a modest upgrade.

Clark-spec finish: closed-cell spray foam on the underside of the roof steel (trusses left exposed) · 2–3 in. foam in the walls · 8 ft plywood wainscot + steel liner above · concrete slab · LED shop lights.

Ceiling stays unfinished. Plywood costs more than drywall but is the better gym surface (impact, wall-mount racks, CrossFit look).

Gym layout, with the rear door opening to a 32×24 ft outdoor workout pad.

Clark-spec costs

Rough estimates for a professional post-frame build in Northern Michigan in 2026, not bids. The typical Clark-spec barn is about **$230,000** (most likely about $185,000–$255,000). Adding asphalt paving of the drive and loop, the outdoor pad, and playground removal brings the typical project total to about **$300,000** (most likely about $250,000–$340,000).

To verify before bidding: a survey of the west loop and grade; well and septic locations; Acme Township height and setback review; the recorded driveway easement (width, construction traffic, maintenance, and any paving limits); and a builder’s site visit for cut and fill.
